People often forget to bring their phone while driving.

People want real-time information.

People are concerned whether they are being overcharged when driving out-of-state.

People are concerned about being busy throughout the day and not having time to categorize multiple short trips.

The most **accurate** and **easiest** way to record road usage.

**GPS System**
- The system uses GPS to capture daily trips and differentiate in- and out-of-state mileage.

**Odometer Camera**
- A monthly update of total mileage through taking a photo of the odometer double-ensures the accuracy of the mileage driven.

**Trip Categorization**
- Categorizing allows for real-time updates either immediately after each trip or cumulatively at the end of the day.
